

Update of the PROXESS 10 abas Connector

This guide describes the update of the PROXESS 10 abas Connector to the current version (Setup Build Version: 12.0.2.0 from November 18, 2020).

Inhalt

1	Update procedure	2
1.1	Update of abas Connector 2020 R1 to abas Connector 2020 R2.....	2

1 Update procedure

1.1 Update of abas Connector 2020 R1 to abas Connector 2020 R2

Note

The update of the abas Connector can also be carried out in systems with Release 2020 R1. This is a release independent setup which does not require the installation of a PROXESS 2020 R2.

Among other things, the setup includes the individualized script processing of the Import Service for the abas interface. In order to ensure the existing processing with the new version, the following procedure must be followed:

- 1.) Stop the Windows service "PROXESS Import Service
- 2.) Copy customized scripts away (default path: C:\ProgramData\Accentum\PROXESS Import Service\AbasLink\config\...)
- 3.) Install the current PROXESS abas Connectors setup set
- 4.) Copy back adapted scripts (default path: C:\ProgramData\Accentum\PROXESS Import Service\AbasLink\config\...)
- 5.) Restart Windows service "PROXESS Import Service
- 6.) Check whether the PROXESS Business Connector service has been started.
